# RENEWABLE ENERGY THE FUTU

## Introduction

## Main Idea 1

The use of hydrocarbons always bee the main source of energy, but there are many problems about its use

## Main Idea 2

The use of alternative energies in the lasts years and its features.

## Main Idea 3

There are many benefits of use the renewable energy, mainly related to the environment

## Supporting Details (Main Idea 1)

1. The disponibility of petroleum is not renewable and easily accessible
2. Environmental impact that they leave as a result of the burning to produce energy
3. Its use causes ecological disasters, pollution and global warming.

## Supporting Details (Main Idea 2)

1. there are many Scientifics investigate to reducing of this kind of pollution.
2. It allows take and use the resources offered by nature, depending on the locality and the resources.
3. There are many types of fuent of energy: water, wind and solar rays.

## Supporting Details (Main Idea 3)

1. There are not greenhouse gases in production processes
2. They are inexhaustible unlike hydrocarbons that represent small reserves
3. Have its origin in natural cycles also do not generate waste of pollution

## Conclusion
